

Global E3 Vision Statement

The Global Engineering Educational Exchange (GE3) is the premier international consortium for (undergraduate) student mobility in the various engineering disciplines.

GE3 is an efficient and transparent mechanism for exchanging engineering students to a broad range of destinations on a tuition-swap basis. Our consortium of over 60 distinguished engineering programs provides an ideal forum for sharing best practices in education abroad and understanding how engineering curricula vary across countries. Members gain access to our professional network of faculty and international education professionals through our annual meetings, site visits to member institutions and on-line discussions.

The consortium, with administrative support from the Institute of International Education, is committed to expanding education abroad options, student participation rates and innovative approaches to international engineering education. Our member institutions demonstrate academic quality; contribute to the program's geographic and cultural diversity; meet our standards for student safety and security; and accommodate students from the wide variety of engineering disciplines and language backgrounds.

GE3: Vision and Value

- Wide range of distinguished engineering programs for your students
- Administrative and Placement support from IIE
- Opportunities to pilot new exchange destinations and programs without bilateral commitment
- Our professional network exchanges *students, ideas and expertise* within our home countries and beyond
